

Ultimo Technology

Expanded Polystyrene Degradation Solution

Rethink HK 2021 : Sustainable Business Forum & Solutions Expo from 5 to 6 October 2021

On 5th and 6th October 2021, WIT Holdings Limited (WIT) took part in Rethink HK 2021, a two-day event designed specifically for business leaders, sustainability practitioners and any interested parties who are researching and resourcing for new sustainable strategies. WIT showcased our patented Ultimo Technology™, a recycling solution that can facilitate circular economy by turning expanded polystyrene (EPS) wastes into recycled polystyrene (PS) raw materials. It was our pleasure to have the opportunity to exchange ideas with Mr. Wong Kam Sing, GBS, JP, Secretary for the Environment, and many other interested parties on the current EPS recycling environment in Hong Kong.

WIT was thankful for all the support we received at the expo. We would like to thank all interested parties and partners who visited our showcase booth to learn more about our mobile EPS degradation solution - "Expanded Polystyrene Recycling Vehicle" and shared their thoughts with us about EPS recycling.
